# Configuring Default Page in ASP.NET Core

Mahesh Chand | Technical Architect, Microsoft Corporation

## Configuring Default Page in ASP.NET Core

In this article, I will show how to configure the default page in the ASP.NET Core Web Application with examples. Default page is the page that loads when a web application starts. Typically, the default page is the home page. In this article, I will show how to change the default page, how to add multiple, and how to set the order of the default page. I will understand the Differences between DefaultFiles, IndexFiles, and UseDefaultFiles. I will also show how to add a custom page as a default page.

### How to Configure Default Page in ASP.NET Core

In an ASP.NET Core Web application, the default page is configured in the ASP.NET Core Web Application. To do so, open Visual Studio 2022 and create a new ASP.NET Core Web application.

Once you click on the Create a new project, select the ASP.NET Core Web Application template. Name the project and click Next button. Select the framework and click on the Create button, as shown in the image below.

Create a new project
ASP.NET Core Web App (Model-View-Controller)
C# Linux macOS Windows Azure Cloud Web
